

Acknowledgment

The editors would like to express their sincere appreciation to many scientists and organizations contributing to the development of this book. First, IGI Global was instrumental in formulating the content of the book by accepting the initial concept of the book proposal. Hannah Abelbeck, (Editorial Assistant) and Christine Bufton (Editorial Communications Coordinator) of IGI Global provided tremendous assistance in the development process for the edited book. We are very grateful to the Editorial Advisory Board, namely Nipon Tangtham at Kasetsart University, Olavi Luukkanen at Helsinki University, and Roger Kjellgren at Utah State University, as well as anonymous reviewers for their diligent and rigorous evaluation of the chapter manuscripts. We would like to thank all the contributing authors for submitting high quality manuscripts and promptness in responding to the subsequent alterations of reviews, despite being scattered all over the globe. We would especially like to thank our editor, Palle Havmoller, for his strong language editorial and proof reading during the final stage of producing the text. Last but not least, we would like to thank Maarten Hajer, Director of the Netherlands Environmental Assessment Agency (PBL) and Don K. Lee, President of International Union of Forest Research Organizations (IUFRO) and now the Minister of the Korean Forest Service for contributing for contributing the remarkable forewords for this book.

Our respective employers, namely the Faculty of Forestry at Kasetsart University, the School of Environment, Resources and Development at Asian Institute of Technology, and the Netherlands Environmental Assessment Agency (PBL), provided logistic and administration support for this undertaking. Our family and friends always encouraged and provided moral support through the long development process. Our research assistants, Suramongkon Siripon at Kasetsart University and Binaya Pasakhala at Asian Institute of Technology, patiently copyedited, formatted various permutations, and searched often obscure references of the manuscripts and deserve foremost gratitude for getting the job done.
