

# Acknowledgment

This work would not have been possible without the support and encouragement of those in our past and present. For instance, I (Rick) rarely think about my work in literacy and technology without recalling fondly my early days under the tutelage and collaboration of scholars and friends like P. David Pearson, Susan Florio-Ruane, Laura Roehler, Don Leu, Chuck Kinzer, Chip Bruce, and Dick Allington. Likewise, this present-day work would not have come to fruition without the support of many.

We ran a very tight ship with rigorous deadlines. Authors were given specific dates for proposals, initial chapters, and final submissions. Reviewers were given chapter assignments and review forms with an equally strict submission schedule. Such a timeframe helped us go from concept to published book in a very short timeframe. Given the topic of our book and the rate at which technology changes, getting authors' works published quickly was a goal our authors and reviewers helped us achieve.

Our authors could have chosen to publish their work anywhere. We appreciate their willingness to join us on this journey to continue to promote a deeper understanding of multimodal composition and digital writing.

In addition to being on tight timelines, our Editorial Review Board deserves credit for completing two major tasks. First, they helped guide the development of this book by completing a double-blind peer-review process. The review process helped us select chapters that were both relevant to the field and steeped in research. The chapters in this book represent a small fraction of the number of quality proposals we received. Second, in writing their reviews, they provided thorough and specific input to authors—a process that strengthened the chapters.

We owe a special debt of gratitude to our friend and colleague Bridget Dalton. Bridget opened up her networks and also provided critical insight and friendship along the way.

We want to thank Chip Bruce for his willingness to provide the foreword for this book. We asked Chip to complete this task while he was in the middle of a busy semester. His writing continues to guide those in the field that are interested in the intersection of literacy and technology.

Katherine Schottke, Rick's graduate assistant at Kent State, provided important support throughout the project. This included the collection and organization of multiple sets of materials. Her support was important in helping us stay on track.

Finally, we want to thank the staff at IGI Global for taking on this project. We continue to enjoy working with Jan Travers and Lindsay Johnston. And, we enjoyed meeting and getting to work with Austin DeMarco on this project. Austin was always quick to respond to a phone call or email.

In closing, we wish to thank our families for their support of our professional efforts, allowing us to give up personal time to complete this task. We are constantly reminded of Philippians 4:11-13.
