ABSTRACT

The ethical crisis in business and information technology is very real. Countering this crisis by creating organizational cultures grounded in moral character is the challenge people face as leaders if they are to regain the respect and confidence of the public. As educators of future business and information technology leaders, how can educators prepare their students to understand, appreciate, and contribute to the establishment of cultures of character in the organizations which employ them—and which they may ultimately lead? In this article the authors distinguish among four corporate cultures with respect to ethics—cultures of defiance, compliance, neglect, and character—and present a blueprint for constructing an organizational culture grounded in moral character. With respect to showing students how to contribute to such a culture, the authors then (a) describe how to establish an effective learning context for teaching about ethics, (b) proffer a number of practical suggestions for student assignments and experiences that can empower students to understand, appreciate, and contribute to organizational cultures of character, and (c) explain how to enhance experiential learning by conducting an effective debriefing session. The authors conclude the article by providing three examples from their own experience illustrating how these ideas can be incorporated into programs designed to show business and information technology students how to contribute to organizational cultures grounded in moral character.

INTRODUCTION

The ethical crisis in business is very real. For extensive evidence of this fact see, for example, Quatro and Sims (2008), Sauser (2005a), Shaw and Barry (2010), and Stanwick and Stanwick (2009). This crisis has expanded exponentially with the ever-increasing sophistication and interconnectivity of modern information technology (Balkin, Grimmelmann, Katz, Kozlovsici, Wagman, & Zarsky, 2007; Stamatellos, 2006). Countering this crisis by creating organizational cultures grounded in moral character—cultures of character as we call them—is the challenge we face as leaders if we are to regain the respect and confidence of the public. Organizations with cultures of character not only comply with legal and ethical standards, they also internalize them from top to bottom such that every member of the firm becomes a guardian of integrity. A culture of character is built by intention. Its leaders possess strong moral fiber and seek to appoint, develop, and reward others like them throughout the organization. They work hard every day to infuse character into the organization through their decisions and their interactions with others. They seek to develop the next generation of leaders so the integrity of the organizations they have served will continue into the future.

As educators of future business and information technology leaders, how can we prepare our students to understand, appreciate, and contribute to the establishment of cultures of character in the organizations which employ them—and which they may ultimately lead? Are there new approaches to teaching ethics in business and information technology (Knapp, 2011; Sauser & Sims, 2012; Sims, 2008; Sims & Sauser, 2011a; Wankel & Stachowicz-Stanusch, 2012) that we can employ for this purpose? In this article we distinguish among four corporate cultures with respect to ethics—cultures of defiance, compliance, neglect, and character—and present a blueprint for constructing an organizational culture grounded in moral character. With respect to showing students how to contribute to such a culture, we then (a) describe how to establish an effective learning context for ethics, (b) proffer a number of practical suggestions for student assignments and experiences that can empower students to understand, appreciate, and contribute to organizational cultures of character, and (c) explain how to enhance experiential learning by conducting an effective debriefing session. We conclude the article by providing three examples from our own experience—one from an undergraduate class, one from an Executive MBA class taught at a distance, and one from a case study prepared for advanced students and professionals—to illustrate how these ideas can be incorporated into courses designed to show business and information technology students how to contribute to organizational cultures grounded in moral character.

ORGANIZATIONAL CULTURES AND CHARACTER

According to Trevino and Nelson (2004, p. 225), “‘Culture’ has become a common way of thinking about and describing an organization’s internal world—a way of differentiating one organization’s ‘personality’ from another.” Schermerhorn (2005) defines organizational culture as “the system of shared beliefs and values that develops within an organization and guides the behavior of its members” (p. G-12). “Whenever someone, for example, speaks of ‘the way we do things around here,’ they are talking about the culture,” continues Schermerhorn (2005, p. 96). Using such important components of culture as core values, stories, heroes, symbols, and rites and rituals, ethical leaders must influence the organization and its members to incorporate and exhibit desirable virtues and behaviors (Sauser, 2005b).

Sauser (2005b) has distinguished among four types of organizational culture with respect to their stance toward ethical behavior in business. This classification scheme, modeled in part on Schermerhorn’s (2005, pp. 75-76) typology of strategies for corporate responsibility, holds that there are four basic types of organizational culture with respect to moral thought and action.
