INTRODUCTION

Learning is a social process (Harasim, 2002; Swan & Shea, 2005; Tu, 2000). Discourse plays a key role in the social process of learning (Harasim, 2002). Therefore, it is extremely important that we understand how students and teachers socially interact in online courses where asynchronous computer-mediated communication (CMC) is the major form of discourse. Theories of social presence help explain how students and teachers interact and learn online.

BACKGROUND

Short, Williams, and Christie (1976) are credited with developing the initial theory of social presence. Short et al. developed their theory of social presence to explain the effects a communication medium can have on the way people communicate. Working from previous research in psychology and communication (i.e., Argyle and Dean’s concept of intimacy and Wiener and Mehrabian’s concept of immediacy), Short et al. defined social presence as the degree of salience (i.e., quality or state of being there) between two communicators using a communication medium. They conceptualized social presence as a critical attribute of a communication medium that can determine the way people interact and communicate. Further, they posited that people perceive some communication media as having a higher degree of social presence (e.g., video) than other communication media (e.g., audio).

In the late 1980s and early 1990s, as the popularity of CMC grew, communication researchers began to apply the theory of social presence developed by Short et al. to CMC. Many of these early researchers came to the conclusion that CMC was antisocial and impersonal because social context cues were filtered out (see Walther, 1992).

In the mid 1990s, researchers with experience using CMC for educational purposes began to question whether the attributes of a communication medium determined its social presence (Garrison, Anderson, & Archer, 2000; Gunawardena, 1995; Gunawardena & Zittle, 1997; Swan, 2003b; Walther, 1996). They argued that a user’s personal
perceptions of presence mattered more than the medium’s capabilities. They also illustrated that contrary to previous research, CMC can be very social and personal (Gunawardena, 1995; Gunawardena & Zittle, 1997) and even hyperpersonal (Walther, 1996).

**MAIN FOCUS: SOCIAL PRESENCE**

**Definitions of Social Presence**

There is not a clear, agreed upon, definition of social presence (Rettie, 2003; Tu, 2002). Instead, researchers continue to redefine it (Picciano, 2002). For instance, Gunawardena (1995) defined social presence as the degree to which people are perceived as “real” in CMC. Garrison et al. (2000), on the other hand, defined social presence as the ability of students “to project themselves socially and emotionally, as ‘real’ people” (p. 94). Tu and McIsaac (2002) defined social presence as “the degree of feeling, perception, and reaction of being connected by CMC” to another person (p. 140). Finally, Picciano (2002) defined social presence as student’s perceptions of being in and belonging in an online course. Nearly everyone who writes about social presence continues to define it just a little differently; therefore making it very difficult for both researchers and practitioners to come to any firm conclusions about the nature of social presence.

**Measuring Social Presence**

Just as social presence is difficult to define, it is even harder to measure. There is little agreement on how to measure social presence (Hughes, Ventura, & Dando, 2007; Lin, 2004; Stein & Wanstreet, 2003). In fact, very few researchers have operationalized social presence into observable and measurable parts. The surveys and coding schemes developed by Gunawardena (1995; Gunawardena & Zittle, 1997), Rourke et al. (2001), and Tu (2002b) have influenced the majority of research on social presence (e.g., Baskin & Henderson, 2005; Hostetter & Busch, 2006; Hughes, Ventura, & Dando, 2007; Lin, 2004; Lomieka & Lord, 2007; Na Ubon & Kimble, 2004; Richardson & Swan, 2003; So, 2005; So & Brush, 2007; Stacey, 2002; Swan, 2002, 2003a; Swan & Shih, 2005; Wise, Chang, Duffy, & Del Valle, 2004).

Gunawardena (1995; Gunawardena & Zittle, 1997) and Tu (2002) created surveys to measure social presence based on past literature in the field. Whereas Gunawardena (1995; Gunawardena & Zittle, 1997) and Tu (2002) focused primarily on surveying and interviewing students about their perceptions of CMC and social presence, Rourke et al. (2001) focused on identifying observable behaviors used by students to project themselves as “real” people. More specifically, Rourke et al. identified three categories and twelve indicators of social presence from their previous work, other literature in the field, and experience reading online transcripts (see Anderson, Rourke, Garrison, & Archer, 2001; Garrison, Anderson, & Archer, 2001; Rourke, Anderson, Garrison, & Archer, 2001); the categories and indicators of social presence are listed in Table 1.

**Table 1. Categories and Indicators of Social Presence**

<table>
<thead>
<tr>
<th>Categories</th>
<th>Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Affective</td>
<td>Expression of emotions&lt;br&gt;Use of humor&lt;br&gt;Self-Disclosure</td>
</tr>
<tr>
<td>Interactive</td>
<td>Continuing a thread&lt;br&gt;Quoting from other messages&lt;br&gt;Referring explicitly to other messages&lt;br&gt;Asking questions&lt;br&gt;Complimenting, expressing appreciation, expressing agreement</td>
</tr>
<tr>
<td>Cohesive</td>
<td>Vocatives&lt;br&gt;Addresses or refers to the group using inclusive pronouns&lt;br&gt;Phatics / Salutations</td>
</tr>
</tbody>
</table>
