Promoting Climate Change Awareness through Environmental Education

Part of the Advances in Environmental Engineering and Green Technologies (AEEGT) Book Series

Lynn Wilson (SeaTrust Institute, USA) and Carolyn Stevenson (SeaTrust Institute/OC@KU, USA)

Description:
Addressing global climate change is a monumental battle that can only be fought by the leaders of tomorrow, but future leaders are molded through education and shaped by the leaders of today. While the pivotal role of education in spreading awareness of climate change is one universally espoused, equally universal is the recognition that current education efforts are falling woefully short.

Promoting Climate Change Awareness through Environmental Education stems the rising tide of shortcomings in environmental education by plugging a known gap in current research and opening a dialogue for the future.

This timely publication focuses on topics such as building resilience to climate change, green learning spaces, gender issues and concerns for developing countries, and the impact of young adults on the future of environmental sustainability.

Readers:
Targeting an audience of young scholars, academics, researchers, and policymakers, this volume provides a much needed dam of empirical evidence regarding the role of youth education in addressing one of the greatest challenges of our age.

Topics Covered:
- Climate Legislation
- Incremental Learning
- Student Perspectives
- Education Conferences
- NGOs and Climate Change
- Sustainable Development
- Gendered Vulnerability
- Science Communication
