Giuseppe Borruso (University of Trieste, Italy)

Spatial analytical techniques and geographical analysis and modelling methods are required in order to analyse data and to facilitate the decision process at all levels. Old geographical issues can find an answer thanks to new methods and instruments, while new issues are developing, challenging the researchers for new solutions.

Geographic Information Analysis for Sustainable Development and Economic Planning: New Technologies tackles topics related to, to-date development of Geographic Information in terms of the technologies available for retrieving, managing, and analyzing geographical data. This book is useful for academic staff, as well as postgraduate students (MSc, PhD levels) in GIS, remote sensing, economic geography, spatial planning, geostatistics, and related fields.

Topics Covered:

- Geographic Information (GI) for Urban Analysis and Planning
- Geographic Information Analysis
- Geographic Information, Safety and Security
- Geostatistics and Spatial Statistics
- GI Analysis for Business, Management and Market Planning
- GI for environmental and health monitoring
- GI for Sustainable Development
- Spatial Decision Support Theory
- Spatial Econometrics
- Spatial Multicriteria Decision Analysis

Print: US $180.00  |  Perpetual: US $270.00  |  Print + Perpetual: US $360.00

Pre-pub Discount:*  
Print: US $170.00 | Perpetual: US $255.00

* Pre-pub price is good through one month after publication date.

Market: This premier publication is essential for all academic and research library reference collections. It is a crucial tool for academicians, researchers, and practitioners and is ideal for classroom use.
