Web Service Composition and New Frameworks in Designing Semantics: Innovations

Patrick Hung
(University of Ontario Institute of Technology, Canada)

Web Services are among the most important emerging technologies in the e-business, computer software, and communication industries with the potential to redefine the ways that companies do business and exchange information.

Web Service Composition and New Frameworks in Designing Semantics: Innovations highlights new developments in Semantic Web services, service-oriented systems, and Web services composition, among others. This book is a valuable resource providing leading technologies, developments, ideas, and trends to an international readership of researchers and engineers in the field of Web services.

Topics Covered:

- Cloud Computing
- Data Dependency Analysis
- Latency
- Mobile Services
- Organisational Sustainability Modelling
- Security in Service-Based Systems
- Semantic Web Services
- Semantic-based Access
- Service-Oriented Systems
- Web Services Composition
