As Web service technologies have matured in recent years, an increasing number of geospatial Web services designed to deal with spatial information over the network have emerged.

**Geospatial Web Services: Advances in Information Interoperability** provides relevant theoretical frameworks and the latest empirical research findings and applications in the area. This book highlights the strategic role of geospatial Web services in a distributed heterogeneous environment and the life cycle of geospatial Web services for building interoperable geospatial applications.

**Topics Covered:**
- Geospatial grid and cloud computing
- Geospatial semantic Web services
- Geospatial service orchestration
- Geospatial service-oriented architecture
- Geospatial Web service ontologies
- Geospatial Web service quality
- Geospatial Web service security
- Geospatial Web service solutions
- Geospatial Web service standards and metadata
- SOA-based geospatial Web portal

**Market:** This premier publication is essential for all academic and research library reference collections. It is a crucial tool for academicians, researchers, and practitioners and is ideal for classroom use.
