Cloud Computing Technologies for Connected Government

Part of the Advances in Electronic Government, Digital Divide, and Regional Development (AEGDRD) Book Series

Zaigham Mahmood
(University of Derby, UK & North West University, South Africa)

Description:
In the developed world, there is an increasing trend towards the use of e-government to further involve citizens in the maintenance of their country. This is not only an improved way to promote existing methods of citizen engagement such as voting or taxation; it also makes information more accessible and increases opportunities for average citizens to make their voices heard.

Cloud Computing Technologies for Connected Government explores the latest research on the use of e-government for enhancing the effectiveness and transparency of public institutions.

This book highlights chapters on a broad scope of topics including, but not limited to, citizen empowerment, collaborative public service, communication through social media, cost benefits of the Cloud, electronic voting systems, identity management, legal issues, and security and privacy for e-government users.

Readers:
This timely publication is indispensable for students, educators, information system specialists, technology experts, and anyone involved in public administration or the management of government departments.

Topics Covered:
- Citizen Empowerment
- Citizenship in the Cloud
- Collaborative Public Service
- E-Government Services
- Electronic Voting Systems
- Identity Management
- Open Government
- Security and Privacy
- Social Media Communication Channels
