Information and communication technologies are directly influencing the way human beings are engaging themselves in their routine activities. The governance including socio-economic environment needs a catalyst for social change for human development. Currently, technologies are required to play the role of a catalyst to bring this social change for human development. The **International Journal of Information Communication Technologies and Human Development (IJICTHD)** will compile theoretical and empirical works that significantly contribute to the still unexplored field of how ICTs can make a difference in the lives of human beings and contribute to human development.
