Assistive, Therapeutic, and Support Technologies
A Collection of 14 Scholarly Titles

This essential collection of 14 scholarly titles covers topics on educational technologies, medical and healthcare technologies, social technologies, human computer interaction, and much more.

The Assistive, Therapeutic, and Support Technologies collection provides modern research that supports the development and transformation of medical technologies. These titles represent IGI Global's innovative coverage on the impact and use of technology in the healthcare field.

Three Convenient Purchasing Options:

**Print:** $2,050
Regular List Price: $2,735
978-1-4666-0342-4

**E-Book:** $3,050
Regular List Price: $4,065
978-1-4666-0343-1

**Print/E-Book:** $4,105
Regular List Price: $5,470
978-1-4666-0344-8

*E-book access is available on a perpetual basis and includes all features of IGI Global's advanced platform. To learn more about IGI Global's platform, visit www.igi-global.com/eresources.

Disabled Students in Education: Technology, Transition, and Inclusivity
David Moore (Leeds Metropolitan University, UK), et al.
Aims to be of interest to disabled students, their parents and teachers, and the people who run, and set policies for, their educational providers.

Technology Enhanced Learning for People with Disabilities: Approaches and Applications
Patricia Ordóñez de Pablos (University of Oviedo, Spain), et al.
Aims to be the leading source of information for all those interested in understanding how IT can promote the scientific discussion of the needs of people with disabilities.

Communication Technology for Students in Special Education and Gifted Programs
Joan E. Aitken (Park University, USA), et al.
Collects ideas about communication technologies and innovative ways of using them to enhance education for students with exceptionalities.

Online Guidance and Counseling: Toward Effectively Applying Technology
B.I. Popoola (Obafemi Awolowo University, Nigeria), et al
Offers a collection of case studies and research from around the globe, comparing and contrasting instructional design and guidance methods from developed and developing countries alike.

Intelligent and Adaptive Learning Systems: Technology Enhanced Support for Learners and Teachers
Sabine Graf (Athabasca University, Canada), Fuhua Lin (Athabasca University, Canada), et al.
Focuses on how intelligent support and adaptive features can be integrated in currently used learning systems.

User-Centered Computer Aided Language Learning
Panayiotis Zaphiris (City University, UK), Giorgos Zacharia (Open Ratings, Inc., USA)
Acts as a guide to help educators, administrators, professionals and researchers find the basis of a framework for the development and management of CALL environments.

Handbook of Research on Personal Autonomy Technologies and Disability Informatics
Javier Pereira (University of A Coruna, Spain)
Proposes a comprehensive description of the needs that must be considered by IT engineers when designing technical assistance tools.

User-Driven Healthcare and Narrative Medicine: Utilizing Collaborative Social Networks and Technologies
Rakesh Biswas (People's College of Medical Sciences, India), et al.
Serves as the latest research available on meta-cognitive assessment and language needs for a diverse student body.

Assistive and Augmentive Communication for the Disabled: Intelligent Technologies for Communication, Learning and Teaching
Lau Bee Theng (Swinburne University of Technology, Malaysia), et al.
Covers ongoing researches to provide a cutting-edge window into this area of promising, new applications.

E-Health, Assistive Technologies and Applications for Assisted Living: Challenges and Solutions
Carsten Röcker (RWTH Aachen University, Germany), et al.
Addresses topics pertinent to understanding the myriad of concerns involved with the implementation of CSS so that CSS technologies may continue to evolve and improve for speech impaired individuals.

Sustainable Language Support Practices in Science Education: Technologies and Solutions
Felicia Zhang (University of Canberra, Australia), et al.
Reviews existing literature in assistive technologies and provides suggestions and solutions for improving the quality of assisted living facilities and residences through the use of e-health systems and services.

Assisted Living: Challenges and Solutions
Carsten Röcker (RWTH Aachen University, Germany), et al.
Collects ideas about communication technologies and innovative ways of using them to enhance education for students with exceptionalities.

Handbook of Research on Personal Autonomy Technologies and Disability Informatics
Javier Pereira (University of A Coruna, Spain)
Proposes a comprehensive description of the needs that must be considered by IT engineers when designing technical assistance tools.

Technology Enhanced Learning for People with Disabilities: Approaches and Applications
Patricia Ordóñez de Pablos (University of Oviedo, Spain), et al.
Aims to be the leading source of information for all those interested in understanding how IT can promote the scientific discussion of the needs of people with disabilities.

Communication Technology for Students in Special Education and Gifted Programs
Joan E. Aitken (Park University, USA), et al.
Collects ideas about communication technologies and innovative ways of using them to enhance education for students with exceptionalities.

Online Guidance and Counseling: Toward Effectively Applying Technology
B.I. Popoola (Obafemi Awolowo University, Nigeria), et al
Offers a collection of case studies and research from around the globe, comparing and contrasting instructional design and guidance methods from developed and developing countries alike.

Intelligent Technologies for Bridging the Grey Digital Divide
Jeffrey Soar (University of Southern Queensland, Australia), et al.
The main focus of the book is to provide insights into current innovation, issues to be resolved, and approaches for wider adoption of CSS at national, local, and their families, and their role in the advancement of assisted living technologies.

Multimodal Human Computer Interaction and Pervasive Services
Patrizia Grifoni (Istituto di Ricerca sulla Popolazione, Consiglio Nazionale delle Ricerche (IRPPC-CNR), Italy)
Provides theoretical and practical concepts, methodologies, and applications used to design and develop multimodal systems.

Computer Synthesized Speech Technologies: Approaches and Applications
Jeffrey Soar (University of Pittsburgh at Johnstown, USA), et al.
Examines computer synthesized speech devices that continue to evolve and improve for speech impaired individuals.

Online Guidance and Counseling: Toward Effectively Applying Technology
B.I. Popoola (Obafemi Awolowo University, Nigeria), et al
Offers a collection of case studies and research from around the globe, comparing and contrasting instructional design and guidance methods from developed and developing countries alike.
