Acknowledgment

The book was reasonably easy to conceive. We were engaged for just over two years in the domain within which we already had a lot of literature studied, papers published, and understanding. It was evident that all the knowledge could be converted into a book, which seemed not that difficult a task. Considering ourselves masters of the domain (strictly reference to the degree work reported resulted in for the third author), we went forward towards writing with great zeal and vigor. However, the process was not that simple and during the writing of the book, the affiliation of third author changed, events cropped up at unwilling times, and related stuff—some intentionally unquoted. The deadline changed uncounted times during the writing process, and the work became mix of impulsive and sinusoidal overtime. A book on planning itself not wisely planned is certainly an irony, but we believe such tales in management are common. With all these developments, there were numerous people who became handy, whom we would like to acknowledge.

The authors acknowledge the valuable inputs of the anonymous reviewers whose comments enabled us to improve the quality of the book by a large amount. Not only were the review comments encouraging, but they helped us improve the presentation of the book by a large amount. The authors further thank the editorial team at IGI-Global for all their help throughout the process.

The authors wish to express sincere thanks to Anshika Pal for her contributions to chapter 10, which played a great role in creating its present form. The authors express their gratitude towards Mohit Maru for the help extended in production of many of the line art figures. While it was easy to scribble something on paper that might result in better understanding of the concepts, the production of the same as professional figures was certainly not. We further thank Sanjeev Sharma for the help extended in formatting the entire draft and putting all the files into proper shape for submission. The authors extend their thanks to Anubhav Kakkar and Shivam Chandra for their inputs to various sections on applied and industrial robotics, which are widespread in the final book. The authors further thank Ritesh Maurya for his inputs on robot path planning using ant colony optimization.

The authors thank the support extended by Prof. Kevin Warwick towards the production of the book. Authors acknowledge the facilities and support extended by the host institutions, Indian Institute of Information Technology and Management Gwalior and School of Systems Engineering, University of Reading, UK. The authors thank all the members of the host institutions who contributed towards the book—directly or indirectly.
PERMISSIONS

Excerpts from text, tables, and figures published in this book are taken from a number of sources with kind permissions from their respective publishers. Details are indicated in individual chapters. All publishers retain the copyright for their material reprinted in this book. For details or permission requests, please refer to the original papers. The authors thank the publishers for reprint permissions.

- Chapter 8, parts of “Introduction,” “Conclusion,” and Section “Hierarchical Evolutionary Algorithm: Hierarchy 1” to Section “Results” are reprinted with few modifications from Kala, R., Shukla, A., & Tiwari, R. (2010). Dynamic environment robot path planning using hierarchical evolutionary algorithms. Cybernetics and Systems, 41(6), 435-454. Reprinted by permission of Taylor & Francis Ltd. (http://www.tandfonline.com).
- Chapter 7, parts of “Introduction,” “Conclusion,” and Sections “Hierarchical MNHS Algorithm” to Section “Simulation and Results” are reprinted with few modifications from Kala, R., Shukla, A., & Tiwari, R. (2011). Robotic path planning in static environment using hierarchical multi-neuron heuristic search and probability based fitness. Neurocomputing, 74(14-15), 2314-2335. Reprint is done on the basis of retained author rights.
- Chapter 8, parts of “Introduction,” “Conclusion,” and Section “Evolutionary Algorithm with Momentum” to Section “Results” are reprinted with few modifications from Kala, R., Shukla, A., & Tiwari, R. (2011). Robotic path planning using evolutionary momentum-based exploration. Journal of Experimental & Theoretical Artificial Intelligence, 23(4), 469-495. Reprinted by permission of Taylor & Francis Ltd. (http://www.tandfonline.com).
• Chapter 8, parts of “Introduction,” “Conclusion,” and Section “HGAPSO with Momentum” to Section “Results” are reprinted with few modifications from Kala, R., Shukla, A., & Tiwari, R. (2012). Robotic path planning using hybrid genetic algorithm particle swarm optimization. International Journal of Information and Communication Technology [Accepted, In Press]. With permission from Inderscience Publishers.
