Elayne Coakes is a senior lecturer in Business Information Management at the Westminster Business School, University of Westminster, UK, teaching mainly in the Strategies for Information Management field. Her research interests lay in the sociotechnical aspects of information systems, especially knowledge management systems and at Westminster she is the co-ordinator of a research cluster, looking at Information and Knowledge Management. She is a member of the BCS Sociotechnical Group and active in promoting this view of information systems strategy and development. She has co-edited a number of books in this field, as well as writing conference papers, articles in journals and several chapters in books. Elayne is also an associate editor of *OR Insight* with special responsibility for knowledge management and is currently involved in editing a special edition of the journal *JORS* on knowledge management and intellectual capital. Her PhD, recently submitted, is a sociotechnical view of the insufficiencies of boundaries and stakeholders in the strategic planning of information systems.

El-Sayed Abou-Zeid is assistant professor of Management Information Systems at the John Molson School of Business, Concordia University, Montreal, Canada. He received his PhD in theoretical nuclear physics from Alexandria University. His articles have appeared in journals such as the *Journal of Knowledge Management* and *Journal of Global Information Technology Management* and several refereed conferences such as the IFIP WG 8.1 working conferences. He is a member of IFIP TC8/WG 8.1 (Information System Design and Evaluation), ACM, and IEEE. His current research interests are knowledge management support systems, strategic alignment of KM systems, cultural ontology and conceptual foundations of IS.
Witold Abramowicz is currently the chair of the Department of MIS at The Poznan University of Economics, Poland. His particular areas of interest are information filtering to MIS, information retrieval, and applications of knowledge discovery in MIS. He received his MSc from The Technical University of Poznan, Poland, PhD from The Wroclaw Technical University, Poland, and habilitation from The Humboldt University Berlin, Germany. He worked for three universities in the Switzerland and Germany for 12 years. He chaired seven scientific international conferences and was a member of the program committees of 71 other conferences. He is an editor or co-author of 11 books and 69 articles in various journals and conference proceedings.

Anders Avdic was born in Arboga, Sweden, in 1950. He received his bachelor of science in 1985 in Systems Science. That same year, he held a position as lecturer at Öbrero University in Örebro, Sweden. In 1995, he wrote his Licentiate thesis on Systems Development Using a Spreadsheet Program. He maintained his position as senior lecturer at the University until 1999. During that year, he completed his doctoral thesis entitled, “User and Developer, User Systems Development.” Dr. Avdic is currently a member of the VITS research group in Linköping, Sweden. His research interests include end user computing, local systems, and knowledge management. Dr. Avdic also enjoys other activities as a seaman and a boring-machine operator.

Rosalina Babo is professor at the Institute of Administration and Accountancy (ISCAP)/Polytechnic School of Porto (Portugal). She is the director of the Information Systems Department. Her primary areas of research are the impact of e-business on Portuguese organisations, knowledge management and usability evaluation.

Joao Batista is professor at the Institute of Accountancy and Administration, University of Aveiro, Portugal. He lectures courses in Informatics. His primary area of research is information systems. Specific research interests are collaborative systems, organizational learning and communities of practice.

Michael Boahene is currently a director at Holism Information Systems Management based in Melbourne, Australia. Michael has previously worked as a consultant with a number of organizations, both in Australia and internationally. His career spans software development, business analysis, project management, organizational change management and consulting. Michael’s current professional interests include research into the effective use of concepts and approaches from a variety of disciplines to organize and manage information systems. This has led to pioneering a methodology for surfacing and critically evaluating underlying assumptions in IS development. Michael has written and presented a number of papers at international conferences, exploring areas such as IS methodologies, IS development issues and knowledge management foundational issues. Michael has a BSc (Hons) degree in Computer Science from the University of Science and Technology, Kumasi, Ghana, a Graduate
Diploma in Management Systems from Swinburne University, Melbourne, Australia, and a Master of IS Management, also from Swinburne University.

**Bendik Bygstad** is a senior lecturer at The Norwegian School of Information Technology, in Oslo, Norway. He has a Master of Sociology from the University of Oslo. He worked 15 years in the computer industry as a consultant and CIO. He is currently working on a PhD, studying the relationship between iterative and incremental software engineering frameworks, and successful organizational implementation. Other research interests include CRM and KM systems, and the use of actor-network theory related to IS implementation.

**Leonor Cardoso** is professor at University of Coimbra (Faculty of Psychology and Education Sciences), Portugal. She lectures courses on Work and Organizational Psychology. Her primary area of research is work and organizational psychology, namely in the domain of knowledge management and organizational learning. She will receive her doctorate in work and organizational psychology from the University of Coimbra in 2003.

**Abdus Sattar Chaudhry** is associate professor at the Division of Information Studies, School of Communication & Information, Nanyang Technological University of Singapore. He has earlier held administrative, teaching, and professional positions in different types of information organizations in Malaysia, Pakistan, Saudi Arabia, and USA. He holds a master’s degree from University of Hawaii and a PhD from University of Illinois. His current areas of interest include organization and management of information and knowledge. He can be reached by e-mail at aschaudhry@ntu.edu.sg.

**George Ditsa** is a lecturer in Information Systems in the School of Economics and Information Systems, Faculty of Commerce, University of Wollongong, Australia. Mr. Ditsa holds a BSc (Hons) degree in Computer Science from the University Science and Technology, Kumasi, Ghana and an MBA (IS) degree from the University of Wollongong. Mr. Ditsa has worked for many years in the IS area as a programmer/analyst and project team leader in various organizations before taking up the lectureship position. His current research interests include strategic IS management, project management, user satisfaction of IS, cultural issues in IS management and, knowledge management and knowledge management systems. Mr. Ditsa has published numerous articles in conference proceedings and academic journals and he is about to complete his PhD on the topic: “Executive Information Systems Use in Organisational Contexts: An Explanatory User Behaviour Testing.”

**Fredrik Ericsson** is, since autumn 2000, a PhD student in the area of information systems development at the Department of Computer and Information Science at Linköping University in Sweden. Fredrik is also a member of the Information Systems...
and Work Contexts (VITS) research group in Linköping, Sweden. Since 1999, Fredrik has been a lecturer at the Department of Informatics at Örebro University in Sweden. Fredrik has a Degree of Master of Science in Systems Analysis and a Bachelor of Science in Business and Economics. Fredrik’s main research interests are knowledge management and organizational learning, development of information systems to support learning in organizational contexts and knowledge management.

**Ahmed Abdel Kader Hussein** finished his MBA in December 2001 from Maastricht School of Management (MSM), The Netherlands. Currently he is working as business analyst in the Gulf Clearing Company. One of his responsibilities there is to conducts and coordinates financial, product, market, operational, and related research to support strategic and business planning within the various departments and programs of the company. Prior to this, he was employed as a senior research analyst in the Egyptian Cabinet Information & Decision Support Center. His responsibilities include interpreting, evaluating, and interrelating research data, and developing integrated analyses and projections for incorporation into governmental strategic decision-making. Hussein holds bachelor’s degree in Economics & Political Science from Cairo University, Egypt. Hussein has been chosen to be the ideal student of the faculty of Economics & Political Science and has been involved with many non-profit, charitable activities. He enjoys sports and outdoor activities. Hussein was born and brought up in the Egypt.

**Murray E. Jennex** is an assistant professor at San Diego State University, USA, and president of the Foundation for Knowledge Management (LLC). Dr. Jennex specializes in knowledge management, system analysis and design, IS security, and organizational effectiveness. He has managed projects in applied engineering and business and information systems development and implementation. His industrial and consulting experience includes nuclear generation, electrical utilities, communications, health services, and governmental agencies. Dr. Jennex is the author of numerous publications on knowledge management, end user computing, international information systems, organizational memory systems, and software outsourcing. He holds a BA in chemistry and physics from William Jewell College, an MBA and an MS in Software Engineering from National University, and an MS in Telecommunications Management and PhD in Information Systems from the Claremont Graduate University. Dr. Jennex is also a registered professional mechanical engineer in the state of California.

**Tony J. Jewels** is a lecturer in the School of Information Systems within Queensland University of Technology, Australia. An IT practitioner for over 30 years, he has developed customised inventory management software for a number of successful Australian organisations, designed software for an export award winning warehouse system, and currently researches in the area of communication practices in IT projects, using knowledge management principles. He holds a business management
degree, an IT masters degree and is a certified member of the ACS in project management. He teaches IT Management and IT Project Management at both undergraduate and postgraduate level.

**K.D. Joshi** is an assistant professor in the School of Accounting, Information Systems, and Business Law at Washington State University, USA. Dr. Joshi holds a PhD in Decision Science and Information Systems from the University of Kentucky. Her research interest is in the area knowledge management and IT workforce. Her research has been published in *Communications of the ACM, Decision Support Systems, Information and Management, Information Systems Journal, Journal of Strategic Information Systems, The Information Society, Knowledge Management Systems: Theory and Practice, Knowledge Management Handbook*, and *Handbook of Electronic Commerce*. She has been awarded an NSF grant to study gender differences in information systems career choice.

**Intae Kang** is a doctoral candidate of the Department of Industrial Engineering at SNU. He holds a BS and MS in industrial engineering (both from Seoul National University). His dissertation research is on knowledge mapping and business modeling.

**Yeongho Kim** is also associate professor of the Department of Industrial Engineering at Seoul National University (SNU). He holds an MS (from SNU) and PhD (from North Carolina State University) in industrial engineering. His research interests have been on workflow management and concurrent engineering.

**Marek Kowalkiewicz**, MSc, is a postgraduate student at the Department of Management Information Systems at the Poznan University of Economics, Poland. His areas of interest focus on knowledge management and e-learning, which include knowledge representation, knowledge structures, and ontologies for KM, semantic networks, distance learning solutions, and courseware preparation. He received his degree with the highest note from the Poznan University of Economics, Poland. He is teaching MIS courses at the university, and at the same time he is a professional IT trainer, with expertise in Linux systems, Web and database programming. Marek attended many international conferences and presented his papers there.

**Ricky Laupase** is completing his doctoral research in knowledge management in which he has been investigating the conversion processes of individuals’ tacit knowledge to organisational explicit knowledge in international management consulting firms. The main focus of his research is to find out how organisational structure and culture, and information technology, support the above conversion processes. At the moment, he is teaching a number of units for undergraduate and postgraduate levels in the School of Management Information Systems and the School of Computer and Information Science at Edith Cowan University, Western Australia. His passion is to
explore and exploit information and knowledge management development and research for improving human interaction with technology.

Mário Lousã is professor at Polytechnic School of Gaya (ISP Gaya), Portugal. He lectures courses on Computer Science as well as a seminar on Information Systems. His primary area of research is information systems, namely in the domain of the automatization of business process, as well as knowledge and organizational learning. He will receive his doctorate in information systems from the University of Minho (Portugal) in 2003.

Denise Johnson McManus is an assistant professor of Information Systems and an Exxon-Calloway Faculty Fellow in the Wayne Calloway School of Business and Accountancy at Wake Forest University, USA. Dr. McManus received her PhD from Auburn University. She has published in the *International Journal of Information Technology and Management, International Journal of Technology Management, Information Resources Management Journal, Information Systems Management Journal*, a case study in *The Management of Telecommunications (Irwin-McGraw-Hill)* and several conference proceedings. Her research includes telecommunications management, knowledge management and the strategic use and effects of information systems on organizations. She has held positions in three *Fortune 500* companies and has 12 years of diversified information systems experience.

Michael Middleton is a senior lecturer in the School of Information Systems at Queensland University of Technology (QUT), Australia. He is a member of the Research Centre for Information Technology Innovation, where his interests include information management, information use analysis, and digital libraries. He has won a variety of grants for research or development of teaching and learning in the area of information services. Some of these have contributed to his extensive list of publications and to the maintenance of his ongoing Internet Web resource sites. He has extensive experience as a consultant with investigations in information services areas including multicultural affairs, parliamentary services, library portals, and controlled vocabularies. He has recently completed the book *Information Management*, published by Charles Sturt University Centre for Information Studies, and his book with Len Asprey, *Integrative Document and Content Management*, is in press with Idea Group.

Helen J. Mitchell is associate head of the School of Management and Entrepreneurship at Unitech, New Zealand. Her particular areas of interest within the school are knowledge management and innovation. Over the last few years, research undertaken has focused on information management and knowledge management. While recognizing and acknowledging the importance of technology and drawing on
her background and experience in technology, the research is viewed from that of the manager who looks to technology to provide the means to enhance and add value to the operation of the organization.

**Karen Nelson** is a lecturer in the School of Information Systems at Queensland University of Technology and a member of the Research Centre for Information Technology Innovation, Australia. Her research focuses on organizational factors implicated in the conduct of information and knowledge management in business contexts. Prior to joining the university, Karen worked in the health and financial sectors, first as a researcher and then as an information management consultant. In 1996, Karen was awarded a first class Honours degree in Information Technology and a University Medal for Academic Excellence. She is currently finishing her PhD thesis, which is due for submission in April 2003.

**Yongtae Park** is associate professor of the Department of Industrial Engineering and associate director of Graduate Program of Technology Management at the Seoul National University (SNU), Korea. He holds a BS in industrial engineering (from SNU) and an MS and PhD in operations management (both from the University of Wisconsin-Madison). His research interests lie in areas of industrial knowledge network, knowledge management systems, and on-line business modeling.

**Violina Ratcheva** is currently a lecturer at the University of Nottingham (UK), teaching Creative Problem Solving and Enterprise Knowledge Management. She received her MA degree in Economics and Retail Marketing from Varna University of Economics (Bulgaria), and MSc in Business Studies from Loughborough University Business School (UK). She has worked as accountant, lecturer in Strategic Management, researcher in European Business and a research fellow in Growing SMEs. Her main research interests are in the area of knowledge creating interactions in inter-organisational business networks. She is currently investigating interaction processes and behaviour changes of virtual teams, knowledge capturing and sharing practices in dispersed organisational environments.

**Teresa Rebelo** is professor at the University of Coimbra (Faculty of Psychology and Education Sciences), Portugal. She lectures courses on Work and Organizational Psychology. Her primary area of research is the work and organizational psychology, namely in the domain of organizational culture and organizational learning. She is a PhD student in Work and Organizational Psychology at the University of Coimbra.

**Bonnie Rubenstein-Montano** is assistant professor of MIS at the McDonough School of Business, Georgetown University, USA. Dr. Montano earned her PhD in Systems Engineering from the University of Pennsylvania (1997). Current research is in the areas of knowledge management and organizational learning. She has

**Saonee Sarker** is an assistant professor of Information Systems at Washington State University, USA. Her research interests include group adoption of technology, virtual teams, and knowledge transfer.

**Anabela Sarmento** is professor at Institute of Administration and Accountancy (ISCAP)/Polytechnic School of Porto (Portugal). She lectures courses on Business Communication, as well as a seminar on Information Society. Her primary area of research is the impact of information systems on organisations, namely in the domain of communication, knowledge and organizational learning, as well as in the role of the context in the use of information systems. She is also interested in the relation between communities of practice and knowledge management. She will receive her doctorate in Information Systems from University of Minho (Portugal) in 2002.

**Charles A. Snyder** is Woodruff Endowed professor of Management (MIS) in the College of Business at Auburn University, USA. He holds a PhD from the University of Nebraska. He has extensive managerial and consulting experience. His research interests include strategic management of information technology, knowledge management, and telecommunications management. He has more than 200 refereed publications, including the *International Journal of Information Technology and Management*, *Journal of Management Information Systems*, *Information & Management*, *the Academy of Management Review* and *Executive*, *California Management Review*, and *Decision Support Systems*. Dr. Snyder is a member of SIM, ACM, DSI, IEEE, IRMA, AIS and other regional, national and international professional societies.

**Andrew Taylor** is associate dean of Research and professor of Information Systems at the Bradford School of Management in the UK. He holds a BSc in Electronics and Computer Systems, an MSc in Industrial Engineering and a PhD in Knowledge Based Systems, all from The Queen’s University of Belfast. Andrew spent several years working in public utilities and government agencies before returning to academia in 1984. He has published more than 100 articles and books on his research interests in knowledge based systems, knowledge management, organizational information systems and performance improvement. He acts as a consultant to many multinational companies and government departments. He is a fellow of the Institution of Electrical Engineers and the Institute of Quality Insurance.

**Greg Timbrell** is a lecturer and researcher in Knowledge Management at the Queensland University of Technology (QUT), Australia. He has published and presented internationally in his area of expertise and advises local and multi-national
organisations on how to improve their advisory and support operations using knowledge-based methods. Greg’s previous experience over 25 years includes being a knowledge manager, IT manager and consultant with a major firm. He is the deputy head of the Information Systems Management Research Group at QUT and chairs the Standards Australia annual conference on knowledge management.

**Ran Wang** is currently a doctoral student in Information Systems at the University of Maryland — Baltimore County, USA. Her current research and dissertation focus on knowledge management and decision technology.

**Khaled Whaba** is an assistant professor at Cairo University (Egypt), Department of Systems and Biomedical Engineering. Dr. Wahba is also the academic advisor at the Regional IT Institute (RITI) in Cairo. He graduated (BSc) from Systems and Biomedical Engineering Department at Cairo University in 1985. He got his MSc from the same department in 1989. Dr. Wahba got his PhD from Technical University of Aachen (RWTH Aachen) in Germany in 1996. Dr. Wahba’s fields of interest are: system/business dynamics, the Web-based applications, information systems, distance education, e-learning, simulation and modeling, control of dynamic systems, stochastic processes, statistics, decision making analysis, pattern recognition and knowledge management. He has supervised more than 70 theses in Master of Business Administration, Master of Science Computer Science, and Master of Science Business Information Technology as well as more than 17 senior projects in systems and biomedical engineering. He evaluated over than 350 theses and final projects in different fields, including business and computer science. Dr. Wahba has reviewed papers for submission in different international conferences in the field of information systems. Dr. Wahba is a member of the Information Resources Management Association (IRMA) and a member of the International Society for System Dynamics as well as the president of the Egypt Chapter of the System Dynamics Society. Dr. Wahba is teaching Information System, System Dynamics and Stochastic Process and System Control. He also acted as adjunct professor at the University of Louisville and as link tutor in Cairo for school of computing science, Middlesex University, UK.

**Gillian Wright** is chair of Strategy and Marketing at the Liverpool Business School, UK. She began her academic career after working in market research and product development in pharmaceuticals, then as a market analyst in electronics. Her PhD research concerned the links between attitudes and behaviour in the context of food and health. Since then her work has focused on effective management of services, mainly in the public sectors. She is a member of the team evaluating the implementation of current government policy in healthcare and has acted as a consultant to hospitals, health commissioners, government departments and professional associations.
Piotr Zawadzki, MSc, is a postgraduate student at the Department of Management Information Systems at the Poznan University of Economics, Poland. His main areas of interest are knowledge management systems, business process automation for e-marketplaces, knowledge representation techniques and structures, ontologies for business processes and knowledge exchange. He received his master’s degree from the Poznan University of Economics, Poland. He is a professional IT trainer for Education Center in Poland, with specialization in Novell & Microsoft based solution and systems integration. He is also a research student at the Poznan University.
