Chapter 6
Understanding Social Identity through Autoethography: Building Intercultural Communication Competencies in Higher Education Classroom

Maria S. Plakhotnik
National Research University Higher School of Economics, Russia

ABSTRACT
The purpose of this chapter is to discuss how instructors could use autoethnography as a course assignment to help students understand their cultural identities and build their intercultural communication competences in higher education classroom. Autoethnography is a qualitative research method that helps people examine their relationship with a group or a culture. The chapter provides an overview of literature relevant to intercultural communication competences, social identity, and autoethnography and then describes the author’s use of autoethnography in an undergraduate course “Social and Cultural Foundations of Education” taught at a large public university in the United States. In her class, the author uses this method to help students examine their cultural identity, or relationship with groups based on their religion, culture, nationality, ethnicity, or other groups relevant to the course.
Understanding Social Identity through Autoethography

The increasing diversity of cultures, which is fluid, dynamic and transformative, implies specific competences and capacities for individuals and societies to learn, re-learn, and unlearn so as to meet personal fulfilment and social harmony. (UNESCO, 2013, p. 4)

INTRODUCTION

In the past few decades, political, social, economic, cultural, and technological changes and advances have interconnected nations, cultures, organizations, and individuals. To successfully navigate in this global environment, organizations and individuals strive to learn skills, attitudes, knowledge, behaviors, and competencies that could help them overcome barriers and achieve their goals. One of these qualities is the intercultural communication competence (ICC). Spitzberg and Chagnon (2011) define ICC as, “the appropriate and effective management of interaction between people who, to some degree or another, represent different or divergent cognitive, affective, and behavioural orientations to the world” (p. 7). This interaction could include verbal and non-verbal exchanges (Ricard, 1993).

“The fact is that it is almost impossible to avoid ICC in the Western nations and increasingly impossible in the globalised communities of the globe” (Brighton, 2013, p. 17). Therefore, higher education classroom has a duty to prepare students to navigate in this global world, to know how to express themselves and respond to others, to unlearn stereotypes and suspend prejudice, to understand how their values and believes influence their behavior and how their culture influences their values, believes, and behavior, and how to adapt to a new intercultural situation (Graddol, 2007).

The purpose of this chapter is to discuss how instructors could use autoethnography as a course assignment to help students understand their cultural identities and build their intercultural communication competences in higher education classroom. Identity, its formation and maintenance, is one of the key themes in research around intercultural communication (Arasaratnam, 2015). The chapter provides an overview of literature relevant to ICC, social identity, and autoethnography and then describe the author’s use of autoethnography in an undergraduate course “Social and Cultural Foundations of Education” taught at a large public university in the United States. In her class, the author used this method to help students examine their cultural identity, or relationship with groups based on their religion, culture, nationality, ethnicity, or other groups relevant to the course.
