ABSTRACT

Consumer behaviors and attitudes represent a continuously evolving field, thus, by understanding consumer behavior towards Apps from marketing strategy standpoint, managers can benefit from acquiring much information from applying and translating new insights into strategies and tactics that could be helpful for retailer’s decision makers. Furthermore, the buying behavior of online shoppers is substantial in the prosperity of Apps marketing strategies and by identifying and understanding the factors that influence the consumer’s buying decision, Apps retailers can design their online marketing strategy accordingly to maximize customer satisfaction and ultimately increase the sales volume. This chapter mainly proposed an integration of Internet consumer attitudes, behavior and Apps marketing strategy. This chapter is twofold in terms of having implications both in theory and practice. Indeed, this study helps in understanding consumer decision-making process in Apps environment and

INTRODUCTION

The area of online marketing is diverse. In recent years, marketing has transformed drastically in the areas of academic and industry (Heinemann & Schwarzl, 2010a). Dwayne et al. (2004) state that the adoption of marketing as firms’ guideline is evolving, to some extent due to the customer databases that enable personalized service at cheaper cost, computer-mediated communication, and partly because of intensive competition and globalization. The notable growth of IT, information system and the capacity to store and process great amounts of personal information has reflected the increased use of the Internet in marketing activities (Dinev & Hart, 2005). Consequently, a new marketing phenomenon is emerging which is Apps marketing. According to Slater, Hult, & Olson (2010), it is fair to state that the firm’s performance is optimized when they develop a creative marketing strategy and ensure the effectiveness of marketing strategy implementation in today’s intensive business world. In fact, a stockholder of all businesses is thinking about how to use Apps related technology in their company performance and practice especially in their marketing strategy.

The remarkable of increasing growth in numbers of Internet users and the promising potential of electronic commerce have pushed firms to conduct business online (Chang & Chen, 2008). Since the early 1990s, the gaining importance of Internet has driven many manufacturers and retailers to invest a significant amount of capital to build the Apps channel (Chu et al., 2010). The scale of the electronic commerce in the global market grows since then. Consequently, the marketing strategies of the firms could be perceived from the layout of their web-page (Tang, 2011), but the Apps related activities replacing Webpage scenarios. The gaining importance of the Apps as an effective marketing channel and the commercial tool has driven businesses to improvise their online venture. Currently various types of organizations from for commercial to non-profit organizations are struggling to implement Apps in their marketing efforts to target their market globally to gain more market share. This makes the understanding that Apps marketing is critical for business survival. Therefore, a growing number of firms and organizations in the various industry are exploiting and creating business opportunities on Apps (Liao & Cheung, 2001) as a new medium of communication.

produce new knowledge to online and Apps retailers, marketing managers as well as marketing and IT scholars. The Apps related technologies have developed as an important medium for marketing in various areas, including expanded geographic scope, novel opportunities for appreciating customers and offering cost efficiencies.
