Synergy With the World Soul: Establishing the Humanitarian Organism

Stephen Brock Schafer, Pacific Rim Enterprises, Lynnwood, USA

ABSTRACT

It may be stipulated that people live in an emergent media reality. Based on robust scientific research in diverse fields, this article shows how research on Jungian dream analysis and neurobiological “coherence” comprise a synchronistic formula for social activism on a scale necessary to achieve synergy with the World Soul that exists as high frequency “bandwidths”—sentence that may be accessed by maintaining high energy coherent frequencies of a humanitarian collective. This is also by using the media-sphere as biofeedback according to the Jungian process of “Compensation” to heal contextual human collectives. In order to establish a practical framework for dealing collectively with the global crisis of values and to avoid capitulation to the forces of darkness, our assumption is that—insofar as people now know—sentence consists of infinite cosmic dimensions or “bandwidths”—an admixture of frequency, color, and sound that exists in a superconductive field approximating the holographic theories of David Bohm and Karl Pribram.

INTRODUCTION

It has been taught that, “Even each passing shadow of a man leaves an ineradicable trace.” (Heart, 1932, 160) “What cannot burn away?” The answer to this old riddle is “thought”. What, then, shall one say about thoughts and words used in the media-sphere? The answer is daunting. The light mindedness, carelessness, and ignorance of humanity is striking, for with each step it leaves the most terrible labyrinth of stratifications. Though these ideas may seem laughable to some, their truth is self-evident. Everything ever known or produced by human beings remains in the quantum field to be accessed by the technology of the internet, and imminent quantum computing will expand access to infinity. This is a precise definition and illustration of the Jungian collective unconscious (CU), and cognitive researchers have already verified some of the dynamics that exist for access of the CU by “the lighted stage” of consciousness. According to Bernard Baars, (1997) virtually all content of the infinite field of CU can be accessed in detail from the lighted stage. Though such quantum-cognitive research is become standard, such awareness has yet to stimulate the scale of research and its applications that are necessary to avert the suicidal consequences of the Global Problematique. (Peccei, Aurelio, 1975)

DOI: 10.4018/IJCESC.2017070102
Contemplating ethics appropriate to the media-sphere can provide direction for ethical human behavior during the paradigm shift into a cosmic dimension of quantum-superconductive sentience and morality. These directions can be seen clearly and universally in the precedents provided by metaphysical teachers like the Christ (the Golden Rule), Confucius (the Silver Rule), Zoroaster (Zend Avestas), Moses (Commandments), and the Buddha (Eightfold Path). (See Smith, Huston, 1991)

This chapter refers to both ancient and modern science in order to clarify the moral/ethical implications of the paradigm shift, to make practical recommendations for addressing the Global Problematic, and to achieve synchronization between the World-Soul and a global Humanitarian Organism.

BACKGROUND

The subject of consciousness is longstanding in scientific circles and even more longstanding in philosophy. In both cases, consciousness has to do with epistemology while sentience is a more ontological concept that goes beyond human consciousness. The term “sentience” alludes to realms of both subhuman and super-human awareness. Studied from the angle of sentience, major correspondences emerge relative to the existential morality required to survive during the paradigm shift into a superconductive culture of conscience that is based on quantum field ontology. In order to address such a subject effectively, a number of integrated subjects must be separated in order to satisfy perceptions and expectations of logical research; i.e., synthesis must be addressed with analysis. This constitutes a fundamental dilemma, and—in view of the subject matter—vast research and verification must be condensed. So, relative to research methodology, the overview is delineated in the following list. However, due to the limited length of this paper, its primary thrust is an argument for the practical science used to verify the existence of superhuman sentience that may be accessed in order to gain assistance, to solve critical planetary problems, and to establish a coherent culture of conscience.

RESEARCH METHODOLOGY

- The unified field of physics is essentially the same as the unified field of Psyche or Divinity—the Absolute, the Ineffable—and both realities exist as vital sentient beings.
- The ancient axiom, “As it is above, so it is below.” Applies to the recursive correlation between the macrocosm and the microcosm. One example of this is the relationship between God and Humanity, and this correspondence may be researched in terms of the human functions (mind, emotion, physical senses, intuition) known symbolically as the elements air, water, earth, and fire. So, the Absolute may be researched in terms of everything known about the virtual realms of metaphor from the perspective of the human Arts and Sciences.
- Unity (non-duality)—God Transcendent—finds expression as the virtual illusion of reality that appears to be a duality—God Immanent.
- In cognitive terms, God Transcendent and God Imminent may be understood as the collective unconscious (transcendence) and the collective conscious (Immanence).
- The cognitive unconscious known to psychiatrists and cognitive researchers not only exists but is a powerful generative dynamic in human perceptions of so-called reality.
- The Jungian process of Analytical Psychology is uniquely authoritative for psychoanalysis with the use of dream symbolism that exists as archetypal patterns in the personal and collective unconscious and is projected as archetypal representations that are perceived as mediated images or virtual realities.
- The Jungian Amplification Method for psychological healing of individuals and collectives using analysis of dreams has been authenticated with decades of research and clinical experience.
