Chapter 36

Entrepreneurship Concept, Theories, and New Approaches

José Manuel Saiz-Alvarez
Tecnologico de Monterrey, Mexico

Martín García-Vaquero
Nebrija University, Spain

ABSTRACT

This chapter deals with the concept and theories of entrepreneurship that can be defined as the type of business strategy focused on the creation of new business ideas, jobs, social wealth, and profit by optimizing the use of productive and commercial resources. Neoclassical and new Keynesian theories are briefly analyzed in the chapter, as well as psychological-based and modern theories, including the jack-of-all trades theory, o-ring theory, resources- and capabilities-based theory, and theory of the optimal triangle. The chapter finishes with the necessity of also including both social and solidarity-based entrepreneurship strategies, alongside the traditional classification made on this concept.

INTRODUCTION

In today’s world, have a good number of active entrepreneurs is key to determining good corporate health of a country. Entrepreneurs discover and exploit new business opportunities guided by intuition (Saiz-Alvarez, Coduras, & Cuervo-Arango, 2013) and risk control, while motivating social change. Complementary to entrepreneurs, capitalists only invest their money searching for share profitability, and managers, as decision-makers, foster mainly first-order competitive advantages in the company (R&D and innovation) by enhancing competition (Cuervo, Ribeiro, & Roig, 2007). When competition is strong, firms are achieving continuous improvements over time, which benefits their stakeholders.

Contrary to Van Praag and Van Ophem (1995), who affirm entrepreneurship was first studied in Cantillon’s Essai sur la nature du commerce en général, published in 1755, the concept of entrepreneur (in the sense of merchant) was first studied in Spain in the second book of Tomás de Mercado’s Tratos y contratos de mercaderes y tratantes discididos y determinados [Deals and Contracts Applied to Certain Merchants and Traders], published in 1569, and reedited with a few tweaks in 1571, as Suma de tratos

Entrepreneurship can be analyzed following a multiple perspective, generating a multidimensional concept (Bula, 2012). While the study of entrepreneurship began for Economics and Managerial Sciences in the second half of the XVI century, the first psychological studies about this issue were published in the 1960s with the seminal works of McClelland (1965), Rotter (1966), and Atkinson (1966). These authors focused their efforts on trying to explain how individual and social motivation is one of the most important psychological factors to explain entrepreneurship, and also discover that imagination, power distance and willingness for taking risks are key factors for success. Moreover, when the possibility of achievement gets higher, entrepreneurial propensity rate increases (Kalkan & Kaygusuz, 2012).

In order to entrepreneurs to have success, they must identify business opportunities (Stevenson & Jarillo, 1990; Barringer & Ireland, 2006; Timmons, 1999; Mariotti & Glackin, 2010), be able of choosing and managing entrepreneurial careers (Haynie & Shepherd, 2011), and be capable of acting entrepreneurially (McMullen & Shepherd, 2006; Shepherd & Patzelt, 2011) by being adapted to business circumstances given their capacity of resilience to failure.

The mentality of entrepreneurs differs, as they are driven by entrepreneurial alertness (Kirzner, 1979) defined as a distinctive set of perceptual and cognitive processing skills directed to opportunity recognition processes. As a result, and given this entrepreneurial alertness, only the most risk-lovers tend to be successful while managing their businesses, as «the entrepreneur always searches for change, responds to it, and exploits it as an opportunity» (Drucker, 1985, p. 25).

Entrepreneurship is the act of innovation involving endowing existing resources with new wealth-producing capacity (Drucker, 1985), as the nature of the decision making context with entrepreneurs’ decisions (Alvarez & Barney, 2005). As a result, «the entrepreneur is someone who is specialized in taking responsibility for and making judgmental decisions that affect the location, form, and the use of goods, resources or institutions» (Hébert & Link, 1989, p. 213).

Entrepreneurs are the business core of a company, especially in newly-born firms. Given the above definitions, entrepreneurship can be defined as the type of business strategy focused on the creation of jobs, social wealth, and profit by optimizing the use of productive and commercial resources.
